

# Brandon Chhom

(209) 244-3021 | Stockton, CA | [s.chhom15@gmail.com](mailto:s.chhom15@gmail.com) | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

## EDUCATION

University of California, Santa Cruz, B.S. Computer Science

Expected Graduation June 2028

GPA: 3.53/4.0, Dean's Honors List

**Relevant Courses:** Data Structures & Algorithms, Computer Systems & C Programming, Machine Learning, Analysis of Algorithms, Discrete Math, Linear Algebra

## EXPERIENCE

**Software Engineer Intern** | *IDX Exchange (Real Estate)*

Boise, ID | Jun 2026 - Present

- Engineered a full-stack property search app (React/Node/Express/MySQL) with six combinable filters and pagination across 53,000+ MLS listings
- Built REST API endpoints for property search, listings, and open houses with connection pooling, parameterized SQL, and reusable validation
- Developed a responsive listings UI with reusable property cards, defensive photo parsing, and request cancellation to eliminate stale search results
- Implemented and tested reusable filters and pagination, preserving search state through page resets and ellipsis navigation

**Software Engineer Intern** | *Selene Odds (Sports Betting Analytics)*

Remote | Jun 2026 - Present

- Built a full-stack feature for browsing live Kalshi prediction-market odds, organizing 1,000+ markets into a category/sport/event hierarchy inferred directly from the data
- Engineered an in-memory caching layer with stale-while-revalidate logic, keeping a fast-changing dataset responsive without hitting the upstream API on every request
- Designed the pricing data model to support multiple venues from day one, so new sportsbooks or markets can be added without reworking the grid UI
- Shipped the feature with 29 backend tests, Docker deployment, and a post-launch data-scoping fix

**Python Tutor** | *UCSC Baskin Engineering*

Santa Cruz, CA | Jan 2025 - Jun 2025

- Tutored 30+ one-on-one and small-group sessions on Python fundamentals, data structures, OOP, and debugging
- Simplified complex programming concepts through targeted explanations and debugging walkthroughs, reducing common student misconceptions

## PROJECTS

**GudEats** - *Social content platform* | MongoDB, Express.js, React.js, Node.js

Jun 2026 - Jul 2026

- Developed a full-stack social platform for sharing food photos, recipes, and restaurant locations through a weekly community feed
- Architected a modular Express backend (controllers, services, models, routes, middleware) with JWT auth in secure HTTP-only cookies
- Designed social features — profiles, following, likes, comments, protected actions, and image uploads with food-photo validation

**ThinkBack** - *AI-Powered Active Learning Platform* | React, Node.js, Express.js

Jan 2026

- Developed a platform that turns passive video watching into an engaging experience by combining real-time AI question generation with automated study guide creation
- Built a scalable Node.js/Express backend with WebSocket support to generate real-time questions via the Opennote API
- Extracted video context by integrating OpenAI Whisper for transcription and OCR for slide-text extraction

**UCVibe** - *Campus Review Platform* | React.js, Node.js, Firebase

Apr 2025 - Jun 2025

- Built a React-based multi-campus review platform with campus-specific facility data, dynamic facility pages, review submission flows, and reusable UI components across dining halls, cafes, markets, lecture halls, and recreation centers

## SKILLS

**Languages:** Python, TypeScript, JavaScript, C, HTML, CSS

**Frameworks & Libraries:** React.js, Next.js, Express.js, Pandas

**Technologies & Tools:** Node.js, Git, GitHub, Docker, Firebase, MongoDB, MySQL
