EDUCATION

University of California, Santa Cruz, B.S. Computer Science

Expected Graduation June 2028

GPA: 3.7/4.0, Dean's Honors List

Relevant Courses: Data Structures & Algorithms, Full Stack Web Development I & II, Mobile Applications, Software Design Project, Computer Systems & C Programming, Machine Learning

Extracurriculars: Asian American Christian Fellowship

EXPERIENCE

Software Engineer Intern, IDX Exchange (Real Estate)

Remote | Jun 2026 - Sept 2026

- Built search and discovery features for a location-based data platform, improving the user experience for exploring businesses and venues by developing React components connected to backend APIs.
- Improved location data navigation by implementing filters, result cards, and dynamic UI states, helping users search and compare listings more efficiently across the IDX Exchange platform.
- Supported production feature development by debugging frontend issues, testing edge cases, and collaborating with the engineering team through Git, pull requests, and code reviews.

Software Engineer Intern, Selene (Sports Betting)

Remote | Jun 2026 - Sept 2026

- Built reusable frontend components for Selene's web platform, improving development speed and UI consistency by using React, JavaScript, and modular component design.
- Integrated frontend views with backend endpoints, enabling users to interact with dynamic application data through clean API calls, state management, and error handling.
- Improved code quality and maintainability by fixing bugs, refactoring application logic, and contributing to team workflows through version control and peer review.

PROJECTS

ThinkBack: AI-Powered Active Learning Platform, TypeScript, React, Web Audio API, Speech-to-Text API

Jan 2026

- Developed a platform that turns passive video watching into an engaging experience by combining real-time AI question generation with automated study guide creation
- Built the frontend for a Chrome extension using TypeScript and React, integrating browser-tab audio capture with real-time speech-to-text transcription workflows
- Designed reusable React components for note creation, saved-note galleries, and study review flows, improving maintainability across the extension UI

UCVibe: Campus Review Platform, React.js, Node.js, Firebase

Apr 2025 - Jun 2025

- Built a React-based multi-campus review platform with campus-specific facility data, dynamic facility pages, review submission flows, and reusable UI components across dining halls, cafes, markets, lecture halls, and recreation centers
- Integrated Firebase Authentication and real-time database storage to restrict review submissions to authenticated users while keeping facility ratings publicly accessible
- Programmed a scalable React frontend with dynamic Google Maps markers, over 100 campus-specific location data, and responsive layouts across desktop and mobile devices

UC Admissions Data Explorer: Data Analytics Dashboard, Python, Pandas, Plotly

Jun 2025 - Jul 2025

- Created and deployed a Streamlit app analyzing 20+ years of UC freshman admissions data across 150k+ records, including GPA, admit rates, demographics, campuses, and majors
- Built 3+ interactive Plotly visualizations with hover tooltips, year sliders, and filters for 10 UC campuses and 8+ race/ethnicity groups
- Cleaned and normalized 150k+ admissions records with pandas to support responsive filtering across campus, year, demographic, and major dimensions.

SKILLS

Languages: Python, TypeScript, JavaScript, HTML, CSS, C

Frameworks & Libraries: React.js, Node.js, Next.js, Express, Pandas, Matplotlib, Plotly

Tools & Databases: Git, GitHub, Docker, Firebase, MongoDB, MySQL, Streamlit, Claude
