EDUCATION

University of California, Santa Cruz, B.S. Computer Science

Expected Graduation June 2028

GPA: 3.7/4.0, Dean's Honors List

Relevant Courses: Data Structures & Algorithms, Full Stack Web Development I & II, Mobile Applications, Software Design Project, Computer Systems & C Programming, Machine Learning, Intro to Analysis of Algorithms

Extracurriculars: Resilient Scholars Student-Leader, Klesis Christian Fellowship Student-Leader

EXPERIENCE

Software Engineer Intern | IDX Exchange (Real Estate)

Boise, ID | Jun 2026 - Present

- Built a Node.js/Express REST API backed by MySQL to search **53K+ MLS listings**, supporting pagination and **6 combinable property filters**
- Implemented reusable validation for **8 query parameters** and parameterized SQL queries, returning descriptive HTTP errors and preventing unsafe database input
- Containerized MySQL 8 with Docker and imported **600+ MB of MLS data**, configuring connection pooling, environment-based credentials, and database health monitoring

Software Engineer Intern | Selene Odds (Sports-Betting Analytics)

Remote | Jun 2026 - Present

- Researched and mapped new market coverage opportunities across Optic Odds, Kalshi, and Polymarket, focusing on futures, specialty props, esports, golf, and non-sports prediction markets.
- Audited existing odds pipeline and codebase to identify currently supported sports, leagues, and market types, helping define gaps in Selene's market data coverage.
- Building structured deliverables and prototype data views to compare market availability, API fields, pricing data, volume, close times, and ingestion feasibility for future pipeline expansion.

Python Tutor | UCSC Baskin Engineering

Santa Cruz, CA | Jan 2025 - Jun 2025

- Tutored **30+ sessions** in one-on-one and small groups on Python fundamentals, data structures, OOP, and debugging, contributing to measurable improvement in assignment completion and exam performance
- Simplified complex programming concepts by developing targeted explanations and debugging walkthroughs, reducing common student misconceptions in an academic support environment

PROJECTS

GudEats - Social content platform | MongoDB, Express.js, React.js, Node.js

Jun 2026 - Jul 2026

- Developing a full-stack social platform where users can share food photos, recipes, and restaurant locations through a weekly community feed.
- Architected a modular Express backend using controllers, services, models, routes, and middleware, with JWT authentication stored in secure HTTP-only cookies.
- Designing social features including profiles, following, likes, comments, protected actions, and image uploads with food-photo validation.

ThinkBack - AI-Powered Active Learning Platform | TypeScript, React, Web Audio API, Speech-to-Text API

Jan 2026

- Developed a platform that turns passive video watching into an engaging experience by combining real-time AI question generation with automated study guide creation
- Built the frontend for a Chrome extension using TypeScript and React, integrating browser-tab audio capture with real-time speech-to-text transcription workflows
- Designed reusable React components for note creation, saved-note galleries, and study review flows, improving maintainability across the extension UI

SKILLS

Languages: Python, TypeScript, JavaScript, C, HTML, CSS

Frameworks & Libraries: React.js, Next.js, Express.js, PyTorch, FastAPI, Pandas

Technologies & Tools: Node.js, Git, GitHub, Docker, Firebase, MongoDB, MySQL
